High-level IPTV Application with MVR (Multicast VLAN Registration)

Solution

High-level IPTV application is designed for using wide-scale deployment of multicast traffic across a service provider network. It's important to reduce the redundant bandwidth of IPTV stream in the higher bandwidth required network. MVR allows a subscriber on a port to subscribe and unsubscribe to a multicast stream on the network-wide multicast VLAN. It enables the single multicast VLAN to be shared in the network while subscribers remain in separate VLANs. MVR provides the ability to continuously send multicast streams in the multicast VLAN, but to isolate the streams from the subscriber VLANs for bandwidth and security reasons.

Reducing IPTV Stream Bandwidth with MVR Solution
