# MSD-S51 / MSD-S52

Digital Multi Switcher

IDK
with your vision, Always.

The MSD-S51 / MSD-S52 is a digital presentation switcher with five inputs and one / two output(s).
For video, five digital and one analog inputs accept a wide variety of video formats including HDMI, DVI, Composite video, Y/C, RGB, and YPbPr. Input video signals are output to HDBaseT and HDMI signals simultaneously at up to QWXGA or 1080p. Two selected input video signals can be displayed on a single screen in picture-in-picture or side-by-side layout. The overlay bitmap function is also supported.
The MSD-S51 / MSD-S52 includes five digital and three analog audio inputs and outputs audio to both of digital and analog connectors.
Audio level of each input/output can be set individually. The Lip Sync function adjusts the gap between video and audio.

The MSD-S51 / MSD-S52 can be configured remotely from RS-232C and LAN while external devices can be controlled via RS-232C, LAN, CEC, or contact closure by registering control commands. The waiting function helps you to send external commands after cooling time passes as power supply control of projectors or the like. External control commands can be executed from front buttons, RS-232C, or LAN; they can also be executed when input channel selection buttons or power supply button is operated.

*1　RJ-45 (HDBaseT connector) is only for extending digital video and audio signals over a Cat5e/Cat6 cable. Use it with IDK's HDBaseT Products. Do not use for LAN devices.
*2　The maximum cable distance varies depending on the connected devices and was measured under following conditions:
　　・1080p@60: When IDK's 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was input or output.
　　The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's
　　cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
*3　The maximum transmission distance was obtained when IDK's CAT.5E HDC cable was used. The distance may not be extended with some device combinations, cabling method,
　　or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
　　The maximum transmission distance is the shorter distance of connected HDBaseT product or sink device's maximum transmission distance.
*4　Some sink devices cannot be controlled from the MSD-S through CEC.
*5　For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the
　　Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were
　　physically disconnected and reconnected. This feature only works for the MSD-S's output. If other devices are connected between the MSD-S's output and sink device, this
　　feature may be invalid.
