

picturall DUO

A beast of a server in a benign package

Picturall's new media server Picturall Duo is a lightweight media server with all the heavyweight software features of Picturall's other media servers. It's perfect for installations that don't require that many outputs, but need total control of the content through one box. In theatre and museum use for instance, 1 to 4 outputs is usually sufficient, but you need rock-solid reliability, and a broad range of video control features such as blending, key-stoning and show programming.

Picturall Duo has two DVI outputs that can be extended to 4 Full HD outputs, and it comes with its own control software, Picturall Commander. You can also use external controllers through ArtNet and DMX if you prefer. Blending layers together is as easy as 1 - 2 - 3 with Picturall Duo, as is warping and display positioning.

■ TECHNICAL HIGHLIGHTS:

- Includes 2 Dual Link DVI outputs
- Extendable to 4 Full HD display outputs using Matrox Triplehead2go or Datapath x4
- Perfect for small scale installations.
- Equal software features compared to other Picturall media servers
- Controllable using Picturall's own Picturall Commander software, or external controllers
- 200GB SSD media storage (default)
- Optional 2 live input cards
- 4K playback
- Uncompressed FullHD playback
